Contents of Volume 8

January

D. Michaeli, E. Benjamini, D. Y. K. Leung and *G. R. Martin:* Immunochemical studies on collagen—II. Antigenic differences between guinea pig skin collagen and gelatin 1

U. Hämmerling, D. A. L. Davies and *A. J. Manstone:* Transplantation antigens in a high molecular weight form—I. Mouse H-2 antigens 7

D. A. L. Davies, U. Hämmerling and *Barbara J. Alkins:* Transplantation antigens in a high molecular weight form—II. Non H-2 mouse antigens and membrane structure 17

A. Saha, S. Sambury, P. Chowdhury and *A. Sargent:* Studies on the urinary proteins of an IgG myeloma patient—I. Characteristics of urinary IgG 25

S. Carrel and *S. Barandun:* Protein-containing polyacrylamide gels: their use as immunoadsorbents of high capacity 39

E. S. Stanislavski, Lilija S. Edvabnaja, V. V. Sergejev, Marta I. Zhvaneckaja and *Natalija A. Rostovceva:* Immunochemical and immunological studies on lipopolysaccharides of Streptomycin-dependent mutants of *Salmonella enteritidis* 49

J. A. Grant and *L. Hood:* N-terminal analysis of normal immunoglobulin light chains—I. A study of thirteen individual humans 63

P. J. Lachmann: The purification of specific antibody as F (ab')2 by the pepsin digestion of antigen–antibody precipitates, and its application to immunoglobulin and complement antigens 81

V. Ghetie and *Cecilia Motaş:* Catabolism of rabbit immunoglobulin G by some cathepsin-rich subcellular fractions isolated from rat liver 89

F. Miller: Glycopeptides of human immunoglobulins—II. Contribution to the antigenicity of the heavy chain 99

R. E. Orynich and *G. H. Wirtz:* Vitamin A: probe of immune complement reactions—II. Enhancement of human complement hemolysis 113

Communication to the Editors:

L. Valenta and *Thérèse Lemarchand-Béraud:* Soluble complexes of radio-iodine-labeled human and bovine thyroptropins with their antisera 121

February

M. M. Glovsky and *H. H. Fudenberg:* Anticomplementary activity in unaggregated 'purified' macroglobulin paraproteins 129

R. L. Longmire, R. S. Smith, R. McMillan and *R. T. Reid:* Quantitation of IgG by the ammonium sulfate technique—I. Interference of the primary interaction between ^{125}I Fc and rabbit anti-human Fc 141

R. L. Longmire, R. S. Smith, R. McMillan and *R. T. Reid:* Quantitation of IgG by the ammonium sulfate technique—II. The immunological specificity of antiserum against human IgG Fc 153

C. J. Sanderson and *D. V. Wilson:* Methods for coupling protein or polysaccharide to red cells by periodate oxidation 163

J. J. Thompson and *L. G. Hoffmann:* Function and physical properties of two distinct forms of the first component of guinea pig complement 169

L. Yuan and *D. H. Campbell:* A unique low molecular weight antigen fragment associated with oligoribonucleopeptide in lymph nodes and spleen 185
T. G. Merrett, L. Levine and *Helen van Vunakis:* Immunochemical studies on pepsinogens A, C and D from the smooth dogfish, *Mustelus canis* 201
C. H. Faust, Jr. and *R. P. Tengerdy:* The role of antigenic conformation in antigen–antibody complex formation 211

March

J. C. McPherson, J. R. Clamp and *A. J. Manstone:* Carbohydrate analysis of membrane derived glycoproteins carrying some cell surface expressed antigens 225
T. E. Michaelsen and *J. B. Natvig:* Isolation and characterization of IgG subclass proteins and Fc fragments from normal human IgG. A method for utilizing 'non a' and 'non g' as genetic markers 235
Gabriel Virella and *R. M. E. Parkhouse:* Papain sensitivity of heavy chain sub-classes in normal human IgG and localization of antigenic determinants for the sub-classes 243
G. K. Khuller and *D. Subrahmanyam:* Antigenicity of phosphatidyl inositomannosides of *Mycobacterium tuberculosis* 251
T. K. S. Mukkur and *A. Froese:* Isolation and characterization of IgM from bovine colostral whey 257
C. Baglioni and *R. C. Williams, Jr.:* Evidence for structural diversity in light chains of kappa type human cold agglutinins 265
T. Atsumi, K. Nishida, Y. Kinoshita and *Y. Horiuchi:* Effect of antigenic valency on precipitin reactions of anti hapten antibodies 271
H. M. Johnson, J. T. Peeler and *B. G. Smith:* Tartrazine: quantitative passive hemagglutination studies on a food-borne allergen of small molecular weight 281
M. Morrison, Gladys Sisco Bayse and *R. G. Webster:* Use of lactoperoxidase catalyzed iodination in immunochemical studies 289

Communication to the Editors:

R. E. Jones, W. A. Hemmings and *W. P. Faulk:* Ethylene glycol as a stabilizing agent in electrofocusing 299

April

Publisher's Announcement i

J. M. Davie and *C. K. Osterland:* Studies on carbohydrate localization in human γM-globulin 303
J. Krüger, J. S. Wayland and *B. H. Waksman:* Specificity of delayed responses to hapten–protein conjugates in rats 319
C. R. Alving and *S. C. Kinsky:* The preparation and properties of liposomes in the LA and LAC states 325

Communication to the Editors:

G. W. Litman, D. Frommel, S. L. Chartrand, J. Finstad and *R. A. Good:* Significance of heavy chain mass and antigenic relationship in immunoglobulin evolution 345

Book Reviews 351

May

R. N. Hiramoto, J. R. McGhee, D. C. Hurst and *N. Marlene Hamlin:* A study of the single radial hemolysis in gel system—I. Factors affecting the model 355

J. R. McGhee, D. C. Hurst, N. Marlene Hamlin and *R. N. Hiramoto:* A study of the single radial hemolysis in gel system—II. Application of the model to mouse 19S hemolytic antibodies 367

R. E. Schrohenloher: Dissociation of Waldenström's immunoglobulin M by the disulfide interchange reaction 375

E. Berger and *F. C. Kafatos:* Immunochemistry of an insect protease, cocoonase, and its zymogen 391

J. Shuster: Pepsin hydrolysis of IgA—delineation of two populations of molecules 405

J. C. Harrington, J. W. Fenton II and *J. H. Pert:* Polymer-induced precipitation of antigen–antibody complexes: 'precipiplex' reactions 413

P. Burtin and *M. C. Gendron:* A precipitation reaction between certain human G immunoglobulins and sulfated galactans 423

Linda J. Duke and *S. Harshman: In vitro* induction of anti-DNP antibody by immunogenic RNA from rabbit liver 431

Communications to the Editors:

C. Bron and *M. D. Poulik:* Urinary glycoprotein antigenically related to human red cell membrane 447

S. Jormalainen, J. Aird and *O. Mäkelä:* Assay of anti-oxazolone antibodies with the aid of oxazolone coupled bacteriophage 450

Announcement 455

June

M. Joniau, A. L. Grossberg and *D. Pressman:* Importance of the phenolate form of the 3-nitro-4-hydroxy-5-iodophenylacetyl (NIP) group for binding to anti-NIP antibody 457

P. J. J. van Munster, G. B. A. Stoelinga and *S. Poels-Zanders:* Isolation of free secretory component(S.C.) from human milk, determination of its molecular weight 471

B. Africa and *E. Haber:* The production and characterization of specific antibodies to aldosterone 479

W. R. Clark, G. Berke, M. Feldman and *S. Sarid:* Macromolecular synthesis during the sensitization of rat lymphocytes on mouse fibroblasts *in vitro* 487

L. G. Hoffmann and *N. P. Stevland:* Difference in dose response between

native and activated first component of guinea pig complement (C1): Reaction with C1 inactivator offers no explanation 499
M. W. Hess, B. Sordat, R. D. Stoner and *H. Cottier:* Quantitative titration of anti-horseradish peroxidase antibody in mouse serum 509
W. Opferkuch, H. J. Rapp, H. R. Colten and *T. Borsos:* The first component of guinea pig complement: hemolytic assays with EA, EAC4 and with rat and guinea pig late acting components 517
O. V. Rokhlin, T. I. Vengerova and *R. S. Nezlin:* RL allotypes of light chains of rat immunoglobulins 525
D. H. Bing: Purification of the human complement protein $C1\bar{s}$ by affinity chromatography 539
Mullinax, Grace Lane Mullinax, M. R. Cohen, C. L. Cromwell and *J. Deboe:* Immunoglobulins as glycoproteins—I. Determination of neutral sugars and hexosamines in bovine gamma globulin by gas–liquid chromatography 551

Communications to the Editors:
J. Leikola, J. R. L. Ping, H. H. Fudenberg and *S. B. Smith:* Studies on a crystalline myeloma protein 559
S. L. Shore, D. J. Phillips and *C. B. Reimer:* Umbrella effect: pitfall in analysis of specificity of antisera to immunoglobulins 562
G. A. Leslie, L. W. Clem and *D. Rowe:* The molecular weight of human IgD heavy chains 565
M. Zaitlin: The preparation of tritium-labeled Fab antibody fragments 569
D. Frommel, G. W. Litman, S. L. Chartrand, U.S. Seal and *R. A. Good:* Carbohydrate composition in the evolution of the immunoglobulins 573
C. Kronvall and *R. C. Williams, Jr.:* The star phenomenon, a three component immunoprecipitation involving protein A 577

Announcements 581

July

B.-K. Seon, O. A. Roholt and *D. Pressman:* Rabbit antibody with light chain having an N-terminal valyl residue 585
D. E. Normansell: Anti-γ-globulins in rheumatoid arthritis sera—II. The reactivity of anti-γ-globulin rheumatoid factors with altered γG-globulin 593
R. Heimer, Marilyn R. Fenton and *J. L. Abruzzo:* Polyclonal 13S human γG immunoglobulin. Purification and characterization of the γG immunoglobulin causing formation of the 13S complex 603
K. A. Kelly, A. H. Sehon and *A. Froese:* Kinetic studies on antibody–hapten reactions—I. Reactions with antibodies and their univalent Fab' fragments 613
R. F. Ashman, A. P. Kaplan and *H. Metzger:* A search for conformational change on ligand binding in a human γM macroglobulin—I. Circular dichroism and hydrogen exchange 627
R. F. Ashman and *H. Metzger:* A search for conformational change on

ligand binding in a human γM macroglobulin—II. Susceptibility to proteolysis 643
C. V. N. Rao, M. Heidelberger and *W. P. Grosvenor:* Immunochemical studies of mangle gum (*Rhizophora mangle L*) 657

Review Article:
R. S. Speirs: Multiple cellular and subcellular responses to antigen. Literature review and hypothesis of immunization 665

Speculations 691

Book Review 693

August

T. Sasazuki: Immunochemical and physicochemical properties of haptoglobin, antihemoglobin antibody, and their complexes with hemoglobin 695
R. S. Martineau, P. Z. Allen, I. J. Goldstein and *R. N. Iyer:* Immunochemical studies on a panosyl–azoprotein conjugate 705
B. L. Slomiany and *M. I. Horowitz:* Cattle blood group J glycolipid—I. Isolation and identification of the trihexoside ceramide component of J hapten 719
A. I. Kulberg, L. M. Bartova and *N. E. Shmelieva:* Interaction of anti-DNP rabbit antibody with peptic Fab′ fragment of homologous IgG 733

Communication to the Editors:
R. More, M. Pinto and *A. Rimon:* Immunogenicity of b_4 allotypic determinant of rabbit IgG and IgM in guinea pigs 741

September

W. Y. Lee and *A. H. Sehon:* Studies on inhibition of rabbit ribonuclease activity by its homologous antibodies 743
W. Y. Lee, L. Gyenes and *A. H. Sehon:* Isolation of rabbit spleen ribonuclease with reverse immunosorbents 751
Y. Matsuoka, M. Takata and *M. Kitagawa:* Idiotypic determinants of immunoglobulins—I. Antigenic homology between the heavy and light polypeptide chains from a γA myeloma protein 759
D. R. Hoffmann, A. L. Grossberg and *D. Pressman:* Specificity fractionation of antibodies from individual animals against the 3-nitro-4-hydroxy-5-iodophenylacetyl (NIP) determinant 769
K. Kobayashi: Studies on human secretory IgA. Comparative studies of the IgA-bound secretory piece and the free secretory piece protein 785
A. P. Kaplan, L. E. Hood, W. D. Terry and *H. Metzger:* Amino terminal sequences of human immunoglobulin heavy chains 801
C. Rivat, Liliane Rivat, Jeannette Bourguignon et *C. Ropartz:* Methodes de détermination de la sous-classe des chaînes lourdes des immunoglobulines γG humaines 813

B. Bonavida: Structural basis for immune recognition of lysozymes—IV. Immunologically active peptide obtained by the action of cyanogen bromide on human lysozyme 829
R. J. Hill: α-Helical regions in immunoglobulins: An estimate based on Kotelchuck and Scheraga's rules 841
T. C. Borut and *F. Aladjem:* Immunochemical heterogeneity of human high density serum lipoproteins 851
E. Pearlstein, P. Eggena and *F. Aladjem:* The human serum high density lipoprotein peptides of very low density lipoproteins and chylomicrons—An appendix 865

Communications to the Editors:

Dianna E. Van Orden: Immunoelectrophoresis and radioimmunoelectrophoresis in gelatin gels 869
Eva Engvall and *P. Perlmann:* Enzyme-linked immunosorbent assay (ELISA). Quantitative assay of immunoglobulin G 871
J. R. Clamp, K. W. Hughes and *J. C. McPherson:* Glycoproteins from human spleen cell surfaces 874

Book Reviews 881

October

E. R. Centeno and *A. H. Sehon:* The use of ethylene maleic anhydride for the preparation of versatile immunosorbents 887
R. Trautman, K. M. Cowan and *G. G. Wagner:* Data processing for radial immunodiffusion 901
K. Hannestad and *T. B. Christensen:* Multiple M-components in a single individual—II. Studies on urinary Fab μ like fragments in macroglobulinemia 917
J. H. Brock and *B. Reiter:* Sensitisation of sheep erythrocytes by cell wall teichoic acid of *Staphylococcus aureus* 933
B. G. Solheim, M. Harboe and *Johanna Deverill:* Individual antigenic specificity of human macroglobulins—II. Dependence of an antigenic determinant on the disulfide bond between the μ and κ chains 939
S. B. Taubman and *I. H. Lepow:* Cleavage of human $C\bar{1}s$ by human lysosomal enzymes, plasmin, and trypsin 951
B. P. Pelet, F. Dolder, H. Jacot-Guillarmod and *H. Isliker:* Kinetic aspects of the reaggregation of a human immunoglobulin M 963

Communications to the Editors:

N. Matthews, G. Stewart and *D. R. Stanworth:* Characterisation of a new tryptic sub-fragment of human and rabbit IgG Fc fragment 973
S. Sonoda and *M. Schlamowitz:* Localization of iodine in trace-labeled immunoglobulin G 981

Book Reviews 987

November

Measurements of Concentrations of Human Serum Immunoglobulins 991

C. M. Arroyave and *H. J. Müller-Eberhard:* Isolation of the sixth component of complement from human serum 995

A. F. Kretova, G. A. Popova and *A. S. Tikhonenko:* Electron microscopy studies of complex of proteocin D52 *Proteus mirabilis* and antibody 1007

W. Augener, H. M. Grey, N. R. Cooper and *H. J. Müller-Eberhard:* The reaction of monomeric and aggregated immunoglobulins with Cl 1011

V. Ghetie and *Cecilia Motaş:* Enzymatic breakdown of Fab fragment by a cathepsin-rich subcellular fraction 1021

T. H. Birkbeck and *J. Stephen:* Immunochemical isolation of vaccinia-virus antigens 1029

L. Pinteric, R. H. Painter and *G. E. Connell:* Ultrastructure of the Fc fragment of human immunoglobulin G 1041

A. F. S. A. Habeeb and *M. Z. Atassi:* Enzymic and immunochemical properties of lysozyme—V. Derivatives modified at lysine residues by guanidination, acetylation, succinylation or maleylation 1047

H. Jaquet: Structural characteristics of Mouse IgA myeloma proteins: comparison of MPC-1 and × 5647 1061

Yu. S. Ovodov, R. P. Gorshkova and *S. V. Tomshich:* Chemical and immunochemical studies on *Pasteurella pseudotuberculosis* lipopolysaccharides—I. Isolation and general characterization 1071

Communication to the Editors:

W. P. Faulk and *G. M. Taylor:* An immunocolloid method for the electron microscope 1081

Book Review 1085

Announcement 1086

December

D. Benjamin and *W. O. Weigle:* The termination of immunological unresponsiveness to bovine serum albumin in rabbits—III. Structural and serological relationships among various serum albumins and their cyanogen bromide fragments 1087

S. Cohen: Theoretical aspects of the immune response 1099

Rebeca Tarrab, L. Schechter and *M. Sela:* Antibody response to polyalanyl determinants in tolerant rabbits 1107

A. K. Bandyopadhyay and *S. K. Dutta:* Role of liver RNA in immunisation process 1117

M. A. Taubman and *R. J. Genco:* Induction and properties of rabbit secretory γA antibody directed to group A streptococcal carbohydrate 1137

A. M. Egorov, V. Ya. Chernyak, Ya. E. Dunaevsky, E. M. Gavrilova and *V. L. Moiseev:* Reversible dissociation of reduced subunits of human γM-globulins into 5S component 1157

A. M. Egorov, V. Ya. Chernyak, Ya. E. Dunaevsky and *A. Szpacenko:* A study of the structure of human γM-globulin subunits by maleation 1165

Communication to the Editors:

S. Avrameas and *T. Ternynck:* Peroxidase labelled antibody and Fab conjugates with enhanced intracellular penetration 1175

Announcement 1181

Aims and Scope

Immunochemistry involves the specialized disciplines of many fields of physical, biological and medica sciences. Most investigators who are interested in immunochemistry are specialists in one or more of thes disciplines and, as a result, immunochemical literature appears in a wide variety of journals and other type of publications. The purpose of *Immunochemistry* is to eliminate the necessity for such dispersed publicatio by serving as a specific medium for material dealing with the chemical and physical aspects of immunolog and related problems. The journal is not intended to replace any of the present journals dealing with genera immunology but it is to be more specifically a chemical journal dealing with antigens and antibodies, physica aspects of immune mechanisms and methodology or investigations related to such subjects.

Several types of articles will be published including book reviews. The major type will be of original experi mental investigations that have not been previously published and that can be considered as complete rathe than preliminary reports. Manuscripts will be reviewed by at least two experts and their evaluation will forn the basis for the recommendations and decision of the regional editor. Full length papers of a theoretica nature also fall within the scope of *Immunochemistry*. Communications to the Editors will also be considere for publication. These will be limited to space equivalent to about 1000 words including tables, figures an illustrations. These may be preliminary reports of original work (not abstract), a theoretical analysis or a brie article of an editorial nature dealing with some problem in immunochemistry. Sufficient information must b presented to justify conclusions. Communications to the Editors will be reviewed as critically as full lengt papers. In addition review articles dealing with recent developments in selected areas of immunochemistr and methodological articles describing immunochemical techniques will be included. Review articles wi usually originate at the request of the Editors but consideration will also be given to contributions suggeste by potential authors.

Since this Journal is intended for international participation by investigators in the field of immunochemistry manuscripts will be published in either English, French, German or Spanish. Pergamon Press will translat Russian manuscripts into English for review and if accepted, the publication will appear in English.

The contents of contributions shall be the sole responsibility of the Authors. Publication shall not impl the concurrence of the Editors or Publishers with the Author's interpretations, conclusions or validity of data

Notes for Contributors

Submission of manuscripts. Manuscripts should be sent to one of the Regional Editors. Contribution from France should be sent to Professor Bussard; those from Switzerland and the British Isles to Professo Isliker; and those from the U.S.S.R. to Dr. Nezlin. Manuscripts from other European countries, Australia an Africa may be sent to any one of the above Editors. Manuscripts from the Eastern United States, Easter Canada, Mexico and South America should be sent to Professor Karush; those from the Western Unite States, Western Canada and Asia should be sent to Professor Campbell.

Form of contributions. Although manuscripts may be submitted in either English, French, Germar Spanish or Russian, publication will be limited to the first four. Russian manuscripts will be translated an published in English if approved. At the discretion of the author an abstract could be submitted with th article in the language of the country of origin of the author. All papers must have an accompanying abstrac in English as well as in the language used for the article. All contributions must be submitted in typewritte duplicates and with lines at least double spaced and with margins which provide sufficient space for notations Submission of three copies of the manuscript will facilitate refereeing and rapid publication. Manuscript dealing with experimental work should be divided into major sections such as Introduction (optional), Exper mental (with Materials, Methods and Results) followed by Discussion, Conclusions and Bibliography. If large number of abbreviations are used, e.g. sRNA, EA, Ag, EEM, etc., it may be advisable to include a glossar defining such terms.

The title, with authors and their affiliations, should be placed on a separate page. On the same page giv an abbreviated title to be used as a running headline.

References should be quoted in the text by author's name and date in brackets, e.g. Smith (1960). The fu references should be cited in an alphabetical list at the end of the paper using the following style:

Campbell D. H. and Lanni F. (1951) *Amino Acids and Proteins* (Edited by Greenberg D. M.), p. 649. Thoma Springfield, Ill.

Franklin E. C., Fudenburg H., Meltzler M. and Stanworth D. R. (1962) *Proc. natn. Acad. Sci. U.S.A.* **48**, 914.

Footnotes. Statements or references which do not fit into the text of the paper or literature reference may be noted by the following symbols: *, †, ‡, §, starting afresh on each page, e.g. . . . crystalline trypsin* Footnotes should be typed at the bottom of the page on which they appear.

Tables. All tabular material, flow charts, etc., should be typed on a separate manuscript page and shoul be intelligible without reference to the text. Headings should be concise, should clearly present the subjec matter, and should be a part of the table. Footnotes to tables should also be placed on the same page an designations should use some system such as superscripts [a], [b], [c], etc., instead of numbers.

Graphs and illustrations. Figures and illustrations, which must be kept to a minimum, should be include separately and not as part of the text. They should be about twice the published size and be clearly marke on the back as to top, number and author's name. Particular attention should be given to the size of the letter ing to avoid unduly small letters in the published version. Either the original or glossy prints may be used care is taken in making good reproduction. Immunoelectrophoretic patterns and other optical pattern should normally be provided in the form of photographic reproductions of the actual pattern not as lin drawings. These patterns as well as gel diffusion patterns should be labeled with symbols which are descriptiv of the materials employed and which do not require reference to the legend for their identification. Indicat on the manuscript where figures or illustrations should be inserted. Legends should be given on a separat page and clearly present enough information to make the figure understandable. The following standar symbols should be used on line diagrams.

General considerations. It is important to all concerned that a manuscript be carefully read for erro and clarity before sending to an Editor. Presentation of data in duplicate form should be avoided and manu scripts will be scanned for excessive length.

Reprints. Where the research is supported by a fund which can be used for page charges, the author invited to make a voluntary contribution towards publication costs, in which case 100 free reprints are pr vided. Further reprints in multiples of 50 can be obtained at reasonable cost if ordered before publication, an an order form for this purpose will be sent to the author.

Proofs will be sent to the first-named author for checking. *Corrections to the paper at this stage must b restricted to typographical errors.* **Any substantial alterations may be charged to the author.**
